

Elaine Cardenas  
Lib. 705 Assign #3  
Atomic Learning  
Sept. 28, 2009

How do you do that? How many times have we seen somebody do something using a software program we use almost daily and thought to yourself, I didn't know you could do that? In most cases, if we took the time to read the manuals for our software we would know about these things. But really, who takes the time, or rather, who has the time to sit and read a manual to see how something works? In many cases the manuals are at best incomprehensible. Most of us get the software installed and make do with a very basic understanding just so we can get by and get on with it.

Atomic Learning provides web-based software training using, short (1 – 3 minute), how-to movies.

As I explored Atomic Learning's index of topics, I found myself drawn to training on iDVD. I recently chose to make a presentation using this software. I really had only a very basic understanding of iDVD. After my experiences last night, I found myself staying glued to my computer watching section after section learning more and more about iDVD. Each section was short and to the point with on-screen demonstrations and easy to understand directions. I found myself quickly loading iDVD and immediately trying out each new trick. If I had a problem, I could simply playback the movie and pay closer attention and try again immediately. I found this be a fantastic way to learn about many software applications that I regularly use.
